

# “Clip System” stair nosing profile for ceramic laid steps

Ceramic tile laying jobs may sometimes be quite delicate with problems which differ from standard applications such as linear wall tiling. Stairs, for instance, to be covered with the same tiles as the floor may require non standard spacing to match different heights from step to connecting floor for example. The **FOLOSTAIR** product range is conceived to face these adjustment problems by featuring valid and lasting technical solutions. Patent pending.

folostair™ FS

## FOLOSTAIR FS 30 A\* Aluminium + Synthetic insert

“Clip system” working technology has been conceived to allow the layer to meet the different requirements of thickness for the various floor-covering materials yet with a limited number of modular elements, reducing then stock commitments.

The system combines an aluminium base section- equipped with an anti-slip insert- with a profile FOLOTRIM- chosen with the desired height-which works as a fixing flange. The system works even with the off-cuts of TR series with a consequent economical advantage.

To choose the correct height of trim to be used, subtract 2 mm from the tile thickness you need to match with.

Example: for 10 mm tiles, insert FoloTrim H = 8 mm into the basic module FoloStair FS, as FoloStair FS will increase the overall height of the assembled section by 2 mm. The required 10mm thickness is then achieved. The synthetic resin insert can be replaced in case of damage or wear and tear.

### CHARACTERISTICS

Base profile in aluminium, with an anti-slip synthetic insert strip for pre inserted in base. FOLOTRIM flange profile is not included as it is to be ordered separately based upon the desired height to match the tile (Tile H reduced by 2 mm). Available endplugs FST height 8/10/12,5 mm.

Material: Natural aluminium extruded  
Synthetic Resinflex insert  
Length: 2,70 meters  
Width: 30 mm
