PS 130

EXTRUDED ALUMINIUM PROFILE

Plasterboard is the preferred material of the modern construction industry for both residential and commercial buildings. The new and unique anodised aluminium profile **PS 130**, has been designed to work with plasterboard installations as both a finishing and decorative element for an added value. This new profile is ideal for use with this type of substrate both as a **negative jolly** providing a modern minimalist effect with the option of joining it to the floor with the skirting board series BF or as a **decorative ceiling gap**, in line with the latest design trends.

The visible section of 13mm x 13mm perfectly fits with the most popular plasterboard thicknesses.
